

• TECHNOLOGY, WITH TRADITION •

Quality must be lasting. A thorough seven-stage anti-corrosion treatment involving phosphate cleaning, underbody sealant and wax injection protects every Rover 827.

Thick, lustrous paintwork is enhanced by a coating of clear lacquer when a metallic finish is selected.

Pearlescent micametallic contains translucent mica particles, giving a unique depth and richness to the coachwork.

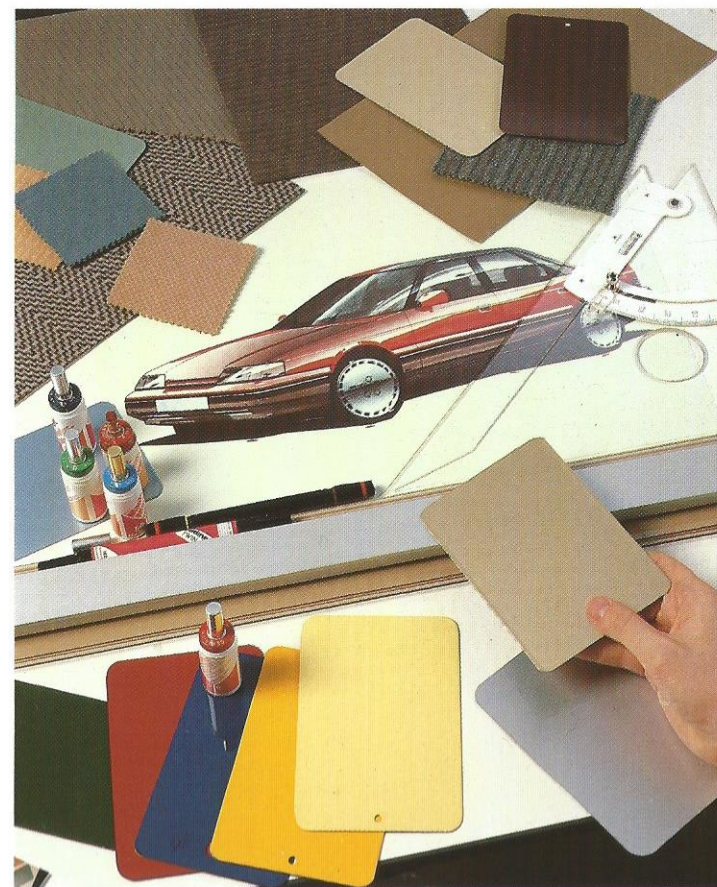

Every Rover enjoys a three year warranty covering paint and body corrosion.

Every care has been taken to ensure an accurate reproduction of the actual paint finish, but the colours shown are to the limitations of the printing process and may therefore vary slightly from the actual material. For colour and trim availability on individual models, please refer to a separate insert or your Rover Dealer.
